

# TUESDAY TALKS

Georgia Tech Faculty Speaker Series

## “Face to Face Discussion with Wearable Computers”

Dr. Starner is one of the pioneers of wearable computing and will talk about how computers can be designed and used to be aware of what users are doing, and also to assist them in doing it. His work includes a gloveless, real-time sign language recognizer; various intelligent agents in support of everyday memory; several augmented realities; and a computer-vision base interactive workbench. Dr. Starner’s current work researches the use of computational agents for everyday-use wearable computers, and he has personally worn a custom computer since 1993! Professor Starner has discussed his research in such international public forums as CBS’s 60 Minutes, CNN, the BBC, the New York Times, and the Wall Street Journal.

### THAD STARNER, PHD

Assistant Professor  
Interface Computing Division  
College of Computing  
Georgia Institute of Technology

**April 26, 2005**

**2:00-3:30pm**

**Wilby Room**

refreshments

**Library and Information Center**

Tuesday Talks is a series of lectures sponsored by the Georgia Tech Library featuring research by Georgia Tech faculty presented for the rest of us...

Research for all of us
